

1. Styled Paragraphs

1.1. Text styles

Styled paragraphs are fully customizable. You can change the **color**, the **font** and the **font size** of text chunks. Let's draw some text with a larger font size. **Now some blue bold text in order to showcase what styled paragraphs can do.**

1.2. Text wrapping and overflow

Long styled paragraph will be wrapped by default if it doesn't fit in the available space, like this one for example.

This long styled paragraph has its wrap setting disabled, so it will NOT be wrapped even if it doesn't fit in the available space.

This long styled paragraph has its wrap setting disabled and text overflow set to hidden, so it will be truncated if it is too long.

1.3. Text underline

Text chunks can be underlined using the default style.

By default, the underline color is the color of the text chunk. We can also add some long underlined text chunk which wraps and then some more regular text.

Finally, we can customize the offset and the thickness of the underlined text.

1.4. Subscript & Superscript

1.4.1. Basic Example

Styled paragraphs allow drawing _{subscript} and ^{superscript} text chunks.

1.4.2. Combined with Underlined and Annotated Text

Subscript and superscript text can be underlined or turned into [link](#) annotations.
